

Biology Bricks Keywords

What This is About

Please use this document to help further your knowledge, by printing out the keywords associated with the relevant page.

This document is set up for you to cut out the keywords (and laminate them if you think it will help), to be used as a quick guide reference for the subject matter that is included.

Warning

Please note: the keywords included in this document are those that link with the page subject matter. They may relate to other pages as well, but they are meant for the page that the link is provided from. Use them as a resource as you so wish.

Printing

Please feel free **not** to print this page of the document, it is merely a reference and information page.

Transmission

This is how a disease is moved from one person to another. It can be airborne, cellular, through skin, or orifices, and more.

Disease

Something that us humans get, and that could potentially be fatal, but can also be treated with medicines.

Bacterial

A type of disease or infection that makes us unwell. Usually treated with medication.

Gonorrhoea

A sexually transmitted disease that affects both men and women, and is commonly called “the clap”.

Sexually Transmitted

A disease or infection that is transferred between two people when they have sexual intercourse.

Salmonella

A contagious bacterial infection that affects people when they eat foods that aren't prepared properly.

Contagious

Infection that is contagious means it can spread while on the host to another host, and usually quickly.

Athlete's Foot

A type of fungal infection that appears visibly on people's feet, usually in form of a rash and causes itching.

Fungal

A type of infection that is of the fungal aspect. Usually presents as a rash or some form of discomfort that is visible.

Symptoms

When unwell, we end up showing symptoms of the infection we have.

Treatment

Medication given in form of tablets, cream, or injection (among others) that help to combat infections and diseases.
