

Biology Bricks Keywords

What This is About

Please use this document to help further your knowledge, by printing out the keywords associated with the relevant page.

This document is set up for you to cut out the keywords (and laminate them if you think it will help), to be used as a quick guide reference for the subject matter that is included.

Warning

Please note: the keywords included in this document are those that link with the page subject matter. They may relate to other pages as well, but they are meant for the page that the link is provided from. Use them as a resource as you so wish.

Printing

Please feel free **not** to print this page of the document, it is merely a reference and information page.

Ecosystem

An ecosystem is the area that all living organisms live within. They interact with each other and show interdependence toward other species.

Biome

Larger than an ecosystem, the biome is one of several larger aspects of the living areas of organisms.

Community

A community is a place where all the living species are in the habitat. Scientists look at communities to explore how one species interacts with another.

Population

The number of a certain species in a community. An example of this is the amount of lions in the entire habitat.

Organism

One single living organism and how they interact with the world around them. For example, a pack of wolves that move from one place to another.

Level of Organisation

The level of organisation includes how an organism reacts to an ecosystem, and there are several layers included where they all interact.

Animals

Animals are populations and communities that interact with each other and depend on each other to grow and reproduce.

Plants

Plants are populations and communities that interact with each other and depend on each other to grow and reproduce.

Insects

Insects are populations and communities that interact with each other and depend on each other to grow and reproduce.

Flora

Flora are populations and communities that interact with each other and depend on each other to grow and reproduce.

Fauna

Fauna are populations and communities that interact with each other and depend on each other to grow and reproduce.

Birds

Birds are populations and communities that interact with each other and depend on each other to grow and reproduce.
