

Biology Bricks Keywords

What This is About

Please use this document to help further your knowledge, by printing out the keywords associated with the relevant page.

This document is set up for you to cut out the keywords (and laminate them if you think it will help), to be used as a quick guide reference for the subject matter that is included.

Warning

Please note: the keywords included in this document are those that link with the page subject matter. They may relate to other pages as well, but they are meant for the page that the link is provided from. Use them as a resource as you so wish.

Printing

Please feel free **not** to print this page of the document, it is merely a reference and information page.

Integumentary System

The integumentary system is a series of external protection devices on your body that help protect against infection and disease.

Skin

Your skin is the largest organ on your body, and is also a layer of protection for infections. We can sweat which can move bacteria off our body.

Nails

Nails serve a double purpose. They can help us with our sense of touch, and they provide a layer of protection for our fingers.

Hair

Hair grows all over our body, and this is because the hair protects from infection. It can move bacteria away from your body.

Exocrine Gland

A gland that secretes a substance outside the body, there are four types of exocrine glands.

Protection

Layers of protection help our body to fight off infection before it gets into our body. They each help by means of moving bacteria and foreign bodies away from our orifices.

Infection

An infection has to go through three levels of protection in order to actually infect us, and our integumentary system is part of that.

Sweat

Sweat is created by an exocrine gland that secretes the fluid through the pores of our skin. It's a mixture of salts and minerals.

Perspiration

Perspiration is another term for sweat, which is created and secreted by exocrine glands.

Displacement of Dirt

The displacement of dirt and foreign bodies happens when we sweat.
